## Claim Rejections - 35 USC § 112

Claim 15 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The connection between the fastener and the walls, as recited in claim 15, is not adequately disclosed.

Claims 19 and 20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 19, "between and exterior and interior walls" is ambiguous.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 2-4 and 38-43 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Styra.

The panels have upper and lower edges with arcuate portions that engage each other, with one (60) ending in a flange and the other (74) ending in a hook. See also hinge coupler 110 that engages elongate sockets 66,68, with snap fasteners, brackets 62 for

Art Unit: 3634

axles with wheels (Fig. 6), the bracket being of "wear-resistant material" since all material resists wear to some extent. Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 9 and 13-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over the preamble in view of Dielman and Rohrer et al.

The preamble discloses what is known. In addition, providing recesses for a latch assembly is taught by Dielman. It would have been obvious to modify the structure of the preamble whereby the latch is mounted in such recesses so as to accurately position and maintain the latch in position. In addition, Rohrer et al discloses panels that are predominately hollow and that have brackets attached thereto by way of bolts that extend through the panel, between interior reinforcing walls, thereby establishing that it is known to mount door hardware to an overhead door in such a manner. It would have been obvious to modify the door structure of the preamble whereby it is hollow and the latch is attached by way of through bolts. Claim 15 is met as best understood.

Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over the preamble in view of Dielman and Rohrer et al as applied above, and further in view of Galbreath.

Art Unit: 3634

Galbreath discloses a door latch with a mounting plate. It would have been obvious to modify the preamble structure to have such a plate so as to form a firm mounting base.

Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over the preamble in view of Dielman and Rohrer et al and Galbreath as applied above, and further in view of Bakalar.

Providing indicia for mounting purposes is well known as illustrated by Bakalar in paragraph 0102.

Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over the preamble in view of Dielman and Rohrer et al as applied above, and further in view of Martin et al.

Martin discloses a door with numerous recesses for strength. It would have been obvious to modify the door panels to have such recesses, one of which could be "for" a (unclaimed) reflector.

Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over the preamble in view of Dielman and Rohrer et al as applied above, and further in view of Jentoft et al.

It is well known to provide an elongate wall structure for engaging a bolt, as illustrated by Jentoft et al at 54,52, and it would have been obvious to provide such for the panels so as to hide the bolts.

Claim 19 is rejected under 35 U.S.C. 103(a) as being unpatentable over the preamble in view of Martin et al.

Art Unit: 3634

Martin et al is applied here as above.

Claim 20 is rejected under 35 U.S.C. 103(a) as being unpatentable over the preamble in view of Martin et al as applied above, and further in view of Galbreath.

Galbreath discloses a door latch with a mounting plate. It would have been obvious to modify the preamble structure to have such a plate so as to form a firm mounting base.

Claims 21,22,24-28,31-33 and 37 are rejected under 35 U.S.C. 103(a) as being unpatentable over the preamble in view of Aquilina.

Aquilina discloses an axle mounting bracket 10 for potentially hollow (column 6, lines 40-41) panels. What is not shown is the fasteners that extend through the panels. However, such are considered an obvious variant over the screws used by Aquilina so as to more securely attach the hinge brackets. The material of the various elements is considered to be obvious so as to achieve the desirable features of metal, plastic, etc.

Claims 29 and 34 are rejected under 35 U.S.C. 103(a) as being unpatentable over the preamble in view of Aquilina as applied above, and further in view of Martin et al.

Martin et al is applied here as above.

## Allowable Subject Matter

Claims 30,35 and 36 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 3634

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Blair M. Johnson whose telephone number is (571) 272-6830. The examiner can normally be reached on Mon.-Fri., 6:30-3:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Chilcot can be reached on (571) 272-6777. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
